

## Accessories for Block Loading Grabs

### Quick Change Device SWV

The Quick-Change-Device (SWV) simplifies the suspension of all types of grabs, including those already available, from one crane or from various cranes in a fleet.

When using the SWV quick coupling or screw coupling should be used for high-pressure hoses.

- An enormous amount of setting up time can be saved by using this device if the grab has to be taken down after each load.
- By using the SWV the driver can change over the attachment without additional help.

left: SWV below the rotator. right: SWV above the rotator

Type	Description	Dead Weight kg (lbs)	Working Load Limit/WLL kg (lbs)	Order-Number
<b>SWV below the rotator</b>	The rotator remains on the cranes in normal circumstances. Always state the type of rotator and crane when upon inquiry	10 (22)	4,000 (8,818)	<b>46200001</b>
<b>SWV above the rotator</b>	Rotator remains on clamp. Always state the type of rotator and crane when upon inquiry	10 (22)	4,000 (8,818)	<b>46200002</b>

### Suspension Link

Type	Description	Dead Weight kg (lbs)	Working Load Limit/WLL kg (lbs)	Order-Number
<b>Below the rotator</b>	For adapting different types of rotary head to the tongs. Always state the type of rotator and crane when upon inquiry	4 (8.82)	4,000 (8,818)	<b>46200072</b>
<b>Above the rotator</b>	For adapting different types of rotator to the crane. Always state the type of rotator and crane when upon inquiry	4 (8.82)	4,000 (8,818)	<b>46200073</b>
