## Multiple Suction Plates MFS

**Easy laying of up to 7 concrete blocks.**

Attached to the lifting units up to HE-150, you can lay up to 7 concrete blocks safely and quickly with the Probst multiple suction plates MFS.

**MFS-150-7-S-15Rd (rigid):** Multiple suction plate (7 bellows) with various predefined hole spacings for mounting the bellows. It is also possible to lift only 5 or 6 bricks. Unused bellows can be plugged with an optionally available protective cover and sealing plate and mounted on top of the traverse for trouble-free operation.

**MFS-150-7-V-15Rd (movable):** Multiple suction plate (7 bellows) with distance adjustment. Especially when laying gutter stones, a distance between the individual stones is prescribed in accordance with DIN18318 (road construction work, paved surfaces and slabbed surfaces). Therefore, with this MFS, a distance of 8 mm can be set between the individual stones in the raised state via a hand lever.

- Height and angle compensation means that even rows of stones that are not completely level can be lifted.
- Fast suction process.
- Sealing bellows can be quickly replaced without tools.

MFS 7-way (rigid)

MFS 7-way (movable)
