## Slipform for Concrete Backfill of Precast Kerbs GR-150

German Patent

When installing kerb stones it is mandatory to get them backfilled with concrete formwork as per DIN 18318.

To avoid time-consuming and expensive assembly of timber formwork at the construction site we developed a slipform with lots of clever features.

The slipform GR-150 adjusts to all prevalent precast kerb dimensions. Effortless sliding due to rollers equipped with ball-bearings.

Within seconds the slipform plate is removed from the formed concrete and put into working position again by 2 eccentric levers.

To compact the concrete backfill - according to DIN specifications - the GR-150 comes with a hand tamper including fastener.

- Applicable at not too narrow curves as well.
- Significant saving of material to some extent compared to conventional concrete liner.
- Optional add-on: Link rod for slipform KS-GR-150.
- Even faster to the finish line! This connection rod links up two or more slipforms for formwork building.
- Durable surface protection by galvanizing.

Type	Working Width mm (in)	Width mm (in)	Dead Weight kg (lbs)	Length mm (in)	Order-Number
GR-150	150 (6)	80 – 200 (3¼ – 7¾)	32 (70)	1,500 (59)	51000066
